

RISVOLTA

AUTODICHIARAZIONE

Il sottoscritto DONNINI MATTEO, rappresentante legale del marchio registrato RISVOLTA, con sede a Colli al Metauro, provincia di Pesaro-Urbino, dichiara sotto la propria responsabilità quanto segue:

Le Materie prime (art. WONDER) del capo in questione sono state acquistate in Italia, in Toscana, presso Filpucci S.p.A. e riportano la certificazione Global Recycled Standard.

RISVOLTA conferma il proprio impegno per la promozione del Made in Italy, la produzione a chilometro zero e l'utilizzo di processi artigianali di alta qualità.

In fede,

Data e Luogo

14/10/25, COLLI AL METAURO

WONDER

Nim 1/15000

Nim 2/15000

50% Recycled Cashmere, 50% Recycled Wool

This yarn is available in both pre-consumer and post-consumer recycled cashmere and wool.

ReWerSo
Woolen & Textile

Made with 50% Recycled Cashmere
Made with 50% Recycled Wool
(GRS 2017-031)

Use: Flat knitting machines. CASHMERE 2/15000 7 gauge 1 thread guide - WONDER 1/15000 12 gauge 1 thread guide - WONDER 2/15000 7 gauge 1 thread guide.

Advice and technical information

Re-winding the yarn is strictly NOT recommended. That operation could damage the yarn's quality, if not made on qualified and suitable machines. If necessary, contact our technical department to get the requested instructions. In consideration of fancy structure and yarn's peculiarity a panel wastage of 5-6% must be considered like standard loss during knitting production. In case of any discrepancy or quality problems, halting production must be stopped and problems immediately reported to our technical department. Our company will NOT acknowledge more than one dozen knitted panels and in any case NO FINISHED GARMENTS. The present color palette manner has to be considered as indicative. The difference in composition may result in slight difference in the actual color. The particular type of fancy spinning may result in slight differences between consecutive lots in the yarn's neps, thus in the overall aspect. Filpucci can guarantee the high quality standards of the yarn if properly knitted on the correct knitting gauge as indicated in the section "using". Any different gauge process or the using in combination with other yarns or fibers for instance must be previously tested from the knitting mill during sampling season. Filpucci remain at disposal for any requested trial or special development which might be requested from the customer but do not assume any responsibility for problems or potential defects caused by the above mentioned different using of the yarn.

Instruction for industrial treatment of solid colour garments

Dry cleaning treatment (without adding water) is recommended to maintain original yarn's peculiarities. To get a soft and bulk result, finishing and washing treatment can be made in water at 40°C in a slightly acidulated bath, with acetic acid (pH=5) and adding anionic detergent. Liquor drain and centrifuge deeply. Then add softener and silicon agents according to the requested final result. Dry in tumbler, pre-heated at 70°-80° C. Pay particular attention during drying process in order to avoid too long time or too strong high temperature process which can affect the yarn's structure and final result. Water washing treatment must be previously tested to value possible changes of knitted panel structure, dimensional stability and distortion.

For strong-contrasting colours or striped garments

Dry cleaning treatment is always recommended. Contact our technical-quality control department which will advise about the possibility to fulfill your requirements.

It's possible to finish the garments with water treatment, using anti-replicant agents. Be sure to rinse deeply and completely.

Don't proceed with softening process in case of stained-coloured water. In that case extend rinsing time accordingly.

It's always recommended to carry on the finishing treatment on the reverse side of garments.

Technical instructions and other information are simply based upon our experience. Therefore must be considered indicative and to be confirmed by specific tests and process carried on from knitting factories, based on their experience and the final result to be achieved. Water-washing treatment must be previously tested by knitting factory to value possible changes of knitted panel structure, appearance, touch, dimensional stability and distortion.

Washing instructions to preserve the garments.

Hand washing in water at 40°C in a neutral bath (pH=7) with neutral-light soap and softening agent for delicate garments. Alternatively dry-cleaning with appropriate solvents.

Dry-cleaning is always strictly recommended for contrasting colours and striped garments. Dry flat is always recommended.

Do NOT expose wet garments under direct sunlight. It is strictly recommended to execute the transferring test as per the garment's label instructions, in order to guarantee sizes conformity and to avoid any possible change and dimensional stability or distortion.

Garment's care instructions for solid colours

Minimum Quantity:

40 kg for sampling with surcharge - 80 kg for bulk production

Promotional Colours:

Cashmere 2/15000: 171-41, 185-45, 211-32

Wonder 1/15000: 172-43, 174-31

Wonder 2/15000: 172-43, 174-31

Average number of knots per core: 3-4

Dye Type: Top Dyed

The conformity to the standard GB 18410 must be informed to us at order placement.

Filpucci will let you know about possible additional costs for the tests of laboratory. We communicate moreover that except signalings, the colorfastness of the first sampling is will be adopted like standard for next bulk order. The presence of some black or coloured hairs, mostly noticeable in white and light colours, must be considered like yarn's and natural materials peculiarity. In case of strong-contrasting colours, advise our technical department previously. For striped knitted garments, contact our sales department, which will advise about the possibility to fulfill your request and possible price differences.

Colours fastness:

(The mentioned values are minimum values obtainable in this yarn in the colour card shades)

Washing in water at 40° C

UNI EN ISO 105 C06: 3

Dry clean

UNI EN ISO 105 D01: 3

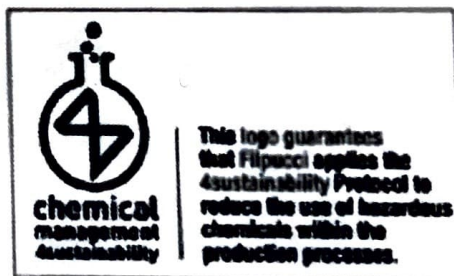

Light

UNI EN ISO 105 B02: 3

Cracking

UNI EN ISO 105 X12-dry 1 wet: 2/1

N.B. For light tones, for the optical white and for particular tones the light fastness is one point lower
